

DEVICE RETENTION APPARATUS LOCKING ASSEMBLY

ABSTRACT

The present invention is directed to a device retention apparatus for an information
5 handling system. The device retention apparatus includes a housing for mounting an
information handling system device and a retaining portion located on the housing,
the retaining portion for engaging the information handling system device when
placed in the housing. A selection mechanism for securing the information handling
system device to the housing is slideably connected to the housing. A locking ramp
10 portion is included on a door assembly of the information handling system for
engaging the selection mechanism.
